

Make your own fan

1. Take a piece of blue, green, orange and red paper.
2. In the example the following measurements have been used: all 8 cm high. Blue and green 12cm, orange 10cm and red 6cm wide.
3. Place lines every centimeter and fold on those lines (an easier way may be to first fold everything in the same direction and then fold to a harmonica (see example red)).
4. Lay the harmonicas on top of each other as shown in the example. Stick them together. Glue is used in the example.
5. Fold a sturdy sheet in half.
6. First attach one side to the sheet (in the example double-sided tape was used).
7. Push the fan together, put glue or double-sided tape on the other side and fold the leaf over it and press it down.
8. Attach the fan on the sheet so you have room to make notes on the sheet. For example, about strategies that can be used in certain situations.
